

## **CAPSTONE-2 Project Proposals**

### **Project-1: Canadian Rental App**

This app will have frontend in React stack and backend in Express JS. Overall users on this App can login & Sign Up and post their rental item these users will be called as owners. Each owner can have multiple rental items. There will listings page which can be viewed by any user without login. However, in order to book any item user has to login or sign Up. There will be listings page then scheduling page and for final booking and payment there will be stripe API integration.

### **Project Idea 2: IMAGE DESCRIPTOR**

This app will take the input an image from the user and performs CRUD operations and provide image's description. This will be achieved by calling external image AI API.

### **Project Idea 3: Weather App**

This app will provide weather card for user entered city. This will be achieved through external weather API. This app will do CRUD operations as user will have stored cities and its weather card.
